AI/ML Engineering – Stage 1

AWS SimuLearn: Cloud Practitioner - [AWS Skill Builder](#)

LANGUAGES

English (Full Professional Proficiency)

Sinhala (Native)

PROJECTS

Online repair service and repair equipment marketplace

Online Designed and implemented the Emergency vehicle repair module in the online repair services and equipment marketplace. Developed the Emergency Vehicle Repair feature with full CRUD functionality, allowing admins to manage repair requests while enabling customers to submit urgent forms. The system identifies available repair teams in real time and sends automated email notifications for rapid response.

Online laundry management system

Implemented the customer feedback feature with full CRUD functionality in the Online Laundry Management System. Customers can submit, view, and update their own feedback, while access control ensures that no user can modify others' feedback.

Online Job Portal

Implemented the job posting feature with full CRUD functionality in the Online Job Portal. Employers can create, update, and manage job listings seamlessly, while the system ensures data integrity and real-time updates for applicants.

Finance Tracking App

A finance tracking app to manage income, expenses, and savings. I designed an intuitive and visually appealing interface to provide users with a seamless experience.
